

Introduction to Deep Neural Networks

0. Logistics
Spring 2020

Neural Networks are taking over!

- Neural networks have become one of the major thrust areas recently in various pattern recognition, prediction, and analysis problems
- In many problems they have established the state of the art
 - Often exceeding previous benchmarks by large margins

How do you feel about Black Friday and Cyber Monday?

- They're great -- I get a lot of bargains!
- The deals are too spread out -- I'd prefer just one day.
- They're a fun way to kick off the holiday season.
- I don't like the commercialization of Thanksgiving Day.
- They're crucial for the retail industry and the economy.
- The deals typically aren't that good.

Microsoft's Artificial Intelligence and Research Unit earlier this week reported that its speech recognition technology [had surpassed](#) the performance of human transcriptionists.

Breakthroughs with neural networks

The screenshot shows a web page from 'The Keyword' section of Google's website. The main title is 'Found in translation: More accurate, fluent sentences in Google Translate'. Below the title, it says 'Barak Turovsky, PRODUCT LEAD, GOOGLE TRANSLATE'. At the bottom, there is a summary: 'In 10 years, Google Translate has gone from supporting just a few languages to 103, connecting strangers, reaching across language barriers and even helping'. There is also a blue circular arrow icon in the bottom right corner.

TRANSLATE NOV 15, 2016

Found in translation: More accurate, fluent sentences in Google Translate

Barak Turovsky
PRODUCT LEAD, GOOGLE TRANSLATE

In 10 years, Google Translate has gone from supporting just a few languages to 103, connecting strangers, reaching across language barriers and even helping

Successes with neural networks

- And a variety of other problems:
 - From art to astronomy to healthcare...
 - and even predicting stock markets!

Neural Networks and the Job Market

This guy didn't know
about neural networks
(a.k.a deep learning)

This guy learned
about neural networks
(a.k.a deep learning)

Course Objectives

- Understanding neural networks
- Comprehending the models that do the previously mentioned tasks
 - And maybe build them
- Familiarity with some of the terminology
 - What are these:
 - <http://www.datasciencecentral.com/profiles/blogs/concise-visual-summary-of-deep-learning-architectures>
- Fearlessly design, build and train networks for various tasks
- *You will not become an expert in one course*

Course objectives: Broad level

- Concepts
 - Some historical perspective
 - Types of neural networks and underlying ideas
 - Learning in neural networks
 - Training, concepts, practical issues
 - Architectures and applications
 - Will try to maintain balance between squiggles and concepts
(concept >> squiggle)
- Practical
 - Familiarity with training
 - Implement various neural network architectures
 - Implement state-of-art solutions for some problems
- Overall: Set you up for further research/work in your research area

Course learning objectives: Topics

- Basic network formalisms:
 - MLPs
 - Convolutional networks
 - Recurrent networks
 - Boltzmann machines
- Some advanced formalisms
 - Generative models: VAEs
 - Adversarial models: GANs
- Topics we will touch upon:
 - Computer vision: recognizing images
 - Text processing: modelling and generating language
 - Machine translation: Sequence to sequence modelling
 - Modelling distributions and generating data
 - Reinforcement learning and games
 - Speech recognition

Reading

- List of books on course webpage
- Additional reading material will also appear on the course pages

Instructors and TAs

- Instructor: Bhiksha Raj
 - bhiksha@cs.cmu.edu
 - x8-9826
- TAs:
 - List of TAs, with email ids on course page
 - We have TAs for the
 - Pitt Campus
 - Kigali,
 - SV campus,
 - Please approach your local TA first
- Office hours: On webpage
- <http://deeplearning.cs.cmu.edu/>

Logistics: Lectures..

- Have in-class and online sections
 - Including online sections in Kigali and SV
- Lectures are streamed
- Recordings will be posted
- Important that you view the lectures
 - Even if you think you know the topic
 - Your marks depend on viewing lectures

Lecture Schedule

- On website
 - The schedule for the latter half of the semester may vary a bit
 - Guest lecturer schedules are fuzzy..
- Guest lectures:
 - TBD
 - Mike Tarr, Scott Fahlman, Graham Neubig, etc.

Recitations

- We will have 13 recitations
 - Possibly a 14th if TAs and students are still enthusiastic after 16 grueling weeks
- Will cover implementation details and basic exercises
 - Very important if you wish to get the maximum out of the course
- Topic list on the course schedule
- *Strongly recommend attending all recitations*
 - *Even if you think you know everything*

Recitations Schedule

- Every Friday of the semester
- See course page for exact details!

Evaluation

- Performance is evaluated based on 3 types of tests
- Weekly Quizzes
- Homeworks
- Team Project

Weekly Quizzes

- 10 multiple-choice questions
- Related to topics covered that week
 - On both slides and in lecture
- Released Friday, closed Saturday night
 - This may occasionally shift, don't panic!
- There will be 14 total quizzes
 - We will consider the best 12
 - This is expected to account for any circumstance-based inability to work on quizzes
 - You could skip up to 2

Lectures and Quizzes

- Slides often contain a lot more information than is presented in class
- *Quizzes will contain questions from topics that are on the slides, but not presented in class*
- *Will also include topics covered in class, but not on online slides!*

Homeworks

- There will be one early homework (released before the start of the semester) and four in-term homeworks
 - Homework 0: Preparatory material for the course
 - Homeworks 1-4: Actual neural-net exercises
- Homeworks 1-4 all have two parts:
 - Part 1: Autograded problems with deterministic solutions
 - You must upload them to autolab
 - Will include mandatory parts and “bonus” parts
 - “bonus” questions will not contribute to final grading curves and give you the chance to make up for marks missed elsewhere
 - Part 2: Open problems posted on Kaggle

Homeworks 1-4 – Part 1

- Part 1 of the homeworks evaluate your ability to code in neural nets on your own from scratch
 - If you implement all mandatory and bonus questions of part 1 of all homeworks, you will, hopefully, have all components necessary to construct a little neural network toolkit of your own
 - “mytorch” 😊
- The homeworks are autograded
 - Be careful about following instructions carefully
 - The autograder is setup on a computer with specific versions of various packages
 - Your code must conform to their restrictions
 - If not the autograder will often fail and give you errors or 0 marks, even if your code is functional on your own computer

Homeworks 1-4, Part 2

- Part 2 of every homework tests your ability to solve complex problems on real-world data sets
- These are open problems posted on Kaggle
 - You compete with your classmates on a leaderboard
 - **We post performance cutoffs for A, B and C**
 - If you achieved the posted performance for, say “B”, you will at least get a B
 - A+ == 105 points (bonus)
 - A = 100
 - B = 80
 - C = 60
 - D = 40
 - No submission: 0
 - **Actual scores are linearly interpolated between grade cutoffs**
 - Interpolation curves will depend on distribution of scores

Homework Deadlines

- Multiple deadlines
- Separate deadline for Autograded deterministic component
- Kaggle component has multiple deadlines
 - *Initial submission deadline* : If you don't make this, all subsequent scores are multiplied by 0.9
 - *Full submission deadline*: Your final submission must occur before this deadline to be eligible for full marks
 - *Drop-dead deadline*: Must submit by here to be eligible for *any* marks
 - Day on which solution is released
- Homeworks: Late policy
 - Everyone gets up to 7 total slack days (does not apply to initial submission)
 - You can distribute them as you want across your HWs
 - You become ineligible for "A+" bonus if you're using your grace days for Kaggle
 - Once you use up your slack days, all subsequent late submissions will accrue a 10% penalty (on top of any other penalties)
 - There will be no more submissions after the drop-dead deadline
 - Kaggle: Kaggle leaderboards stop showing updates on full-submission deadline
 - But will continue to privately accept submissions until drop-dead deadline
- ***Please see course webpage for complete set of policies***

Course project

- If you're taking 11-785, you will be required to do a course project
- Projects are done by teams of students
 - Ideal team size is 4
 - You are encouraged to form your teams early
- Projects are intended to exercise your ability to comprehend and implement ideas beyond those covered by the HWs
- Project can range from
 - Implementing and evaluating cutting-edge ideas from recent papers
 - *Verifying* results from “hot” published work
 - “Researchy” problems that might lead to publication if completed well
 - Proposing new models/learning algorithms/techniques, with proper evaluation
 - Etc.

Course project

- Project teams must be formed by mid February
 - If you don't form your own teams, we will team you up
- Each team must:
 - Submit a project proposal by the first week of March
 - Submit a mid-way report $\frac{3}{4}$ way through the semester
 - First week of April
 - Present a project poster at the end of the semester
 - Submit a full report at the end of the semester
 - Templates for proposals and reports will be posted
- *Each team will be assigned a mentor from among the TAs, who will monitor your progress and assist you if possible.*
- **The project is often the most fun portion of the course**

Grading

<u>Weekly Quizzes</u>	24%
14 Quizzes, bottom two dropped	24%
Assignments	51%
HW0 – Preparatory homework	(AL) 1%
HW1 – Basic MLPs	(AL + Kaggle) 12.5%
HW2 – CNNs	(AL + Kaggle) 12.5%
HW3 – RNNs	(AL + Kaggle) 12.5%
HW4 – Sequence to Sequence Modelling	(Kaggle) 12.5%
<u>Team Project (11-785 only)</u>	25%
Proposal	TBD
Mid-term Report	TBD
Project Presentation	TBD
Final report	TBD

Preparation for the course

- Course is implementation heavy
 - A lot of coding and experimenting
 - Will work with some large datasets
- Language of choice: Python
- Toolkit of choice: Pytorch
 - You are welcome to use other languages/toolkits, but the TAs will not be able to help with coding/homework
 - Some support for TensorFlow
- We hope you have gone through
 - Recitation zero
 - HW zero
 - Carries marks

Additional Logistics

- Discussions:
 - On Piazza
- Compute infrastructure:
 - Everyone gets Amazon tokens
 - Initially a token for \$50
 - Can get additional tokens of \$50 up to a total of \$150

This course is not easy

- A lot of work!

This course is not easy

- A lot of work!
- *A lot of work!!*

This course is not easy

This course is not easy

- A lot of work!
- *A lot of work!!*
- ***A lot of work!!!***
- ***A LOT OF WORK!!!!***

Not for chicken!

This course is not easy

- A lot of work!
- *A lot of work!!*
- ***A lot of work!!!***
- ***A LOT OF WORK!!!!***

But somewhat calibrated (over the years) to ensure it is doable

Over 50% of students got some flavor of A each of the past two semesters and they deserved it

This course is not easy

- A lot of work!
- *A lot of work!!*
- ***A lot of work!!!***
- ***A LOT OF WORK!!!!***
- *Mastery-based* evaluation
 - Quizzes to test your understanding of topics covered in the lectures
 - HWs to teach you to implement complex networks
 - And optimize them to high degree
- Target: Anyone who gets an “A” in the course is technically ready for a deep learning job

HW0 / Recitation 0

- Please, please, please, please, please go through the videos for recitation 0, and complete HW0.
 - These are essential for you to gain comfort with the coding require in the following homeworks
- HW1 part 1 also has many components intended to help you *later* in the course
 - So if it seems a bit dense, please bear with it, its worth it
- HW1 is the easiest HW!

Questions?

- Please post on piazza
